

Gaura - Nitai Float & Accessories

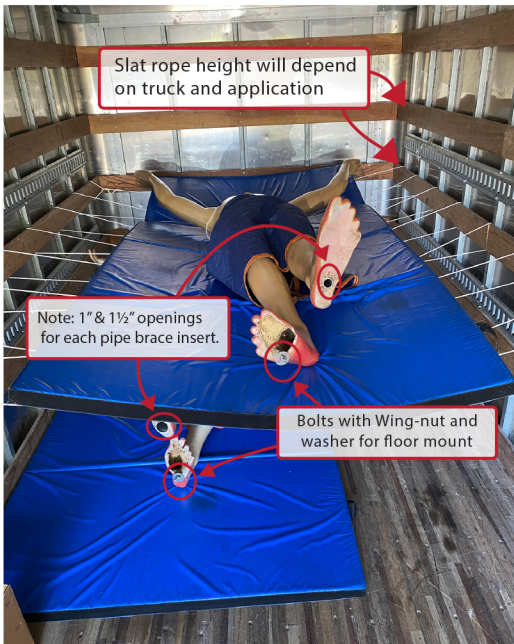

Initial load lay-out for 25' truck. Notice 2 steel pipes at float floor, be careful, tripping hazard. Lashings will be next, then Gaura-Nitai are placed.

This opening is for Human access, the rest are blocked by corner iron & cable

This photo is of the access holes located under the floats floor. 1bolt in each opening for GAURA & NITAI.

Slat rope height will depend on truck and application

Note: 1" & 1½" openings for each pipe brace insert.

Bolts with Wing-nut and washer for floor mount

With GAURA-NITAI on ropes and mats. In this application we need to choose which elevation to accommodate. This example is in a smaller truck. When loading with floats, we will need higher clearance in our lashing locations.

With GAURA-NITAI on mats, at backend. Tools, small items and boxes may be placed around open space, as long as they won't fall or bump into other items.
